Your **Platform**
Your **Broker**
Your **Control**

Your trading accounts remain with your preferred broker.

Your strategy logic and risk parameters remain under your control.

LogiRev provides the technology layer connecting your strategy to execution without taking custody of your funds or trading on your behalf.

Built for transparency

- **No black boxes.**
- **No forced broker transfers.**
- **No loss of control.**

Logirev

Turn Your Trading Strategy **Into Technology**

Algorithmic Trading Bots, Terminals & Execution Systems

What Logirev Does

Turn Trading Logic Into Technology

LogiRev builds custom trading systems for traders, strategy developers and financial-market businesses.
From strategy logic and risk rules to execution, broker connectivity and monitoring, we engineer the technology required to operate your trading workflow.

One Technology Stack Built Around Your Trading

Algorithmic Trading

Automate strategy logic, signals, entries, exits and risk controls.

Trading Terminals

Bring positions, orders, strategies and account controls into one tailored interface.

Broker & Platform Connectivity

Connect your trading workflow with brokers, platforms, market data and execution APIs.

Trading Infrastructure

Backtest, validate, monitor and operate trading systems across accounts and environments.

From Strategy To Execution

01 **Define**

Translate your trading rules, signals, risk parameters and execution requirements into a clear system specification.

02 **Engineer**

Build the strategy engine, integrations, controls and trading interface around your workflow.

03 **Validate**

Test the logic, execution behaviour and system performance before production deployment.

04 **Operate**

Monitor positions, execution and accounts through infrastructure designed for ongoing control.
